The smart mirror for everyday mindfulness

built on

care OS

BMind is a customizable smart mirror for mental wellness, built on the latest generation of the CareOS platform. It provides personalized recommendations based on a user's mental state, as part of a seamless, touchless experience with gesture recognition, voice command, and intent detection.

Mood identification & analysis

Natural Language Processing perform sentiment analysis, enabling a responsive interaction and providing personalized guidance.

Personalized mental health coaching

Large Language Model (LLM) to enable personalized conversations and deliver AI-generated mindfulness exercises.

Touchless navigation with hand gesture

Controlling your mirror without touching it

Voice based communication

Speech recognition tailored for seamless and natural communication when interacting with the mirror.

Device connectivity

You can connect your smart devices with the mirror to control them through the mirror
